Maxprefabs Containers

Containers are manufactured by un-welded system technology. This specification provides longer life than conventional containers. The containers are used as office, accommodation, sanitary, dining halls and in many other purposes. The containers are used in local market and also have been exported to many countries in the world.

ROOF COVERING

40 mm thick of **PU** insulated sandwich panels are used as roof covering.

INSULATION

EPS, **PU** and **Rockwool** insulated sandwich panels are used as wall covering.

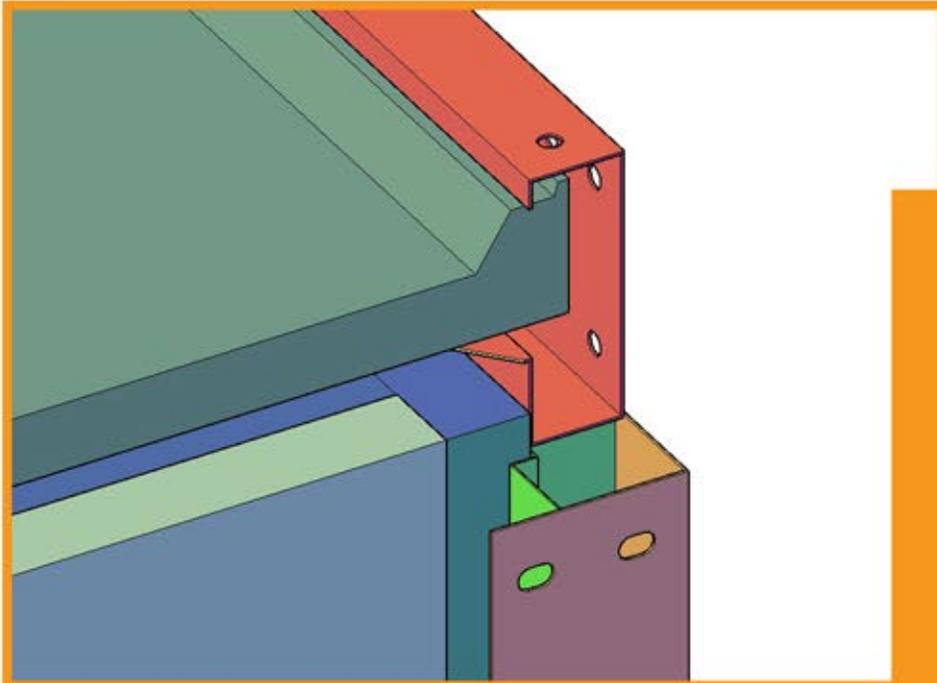

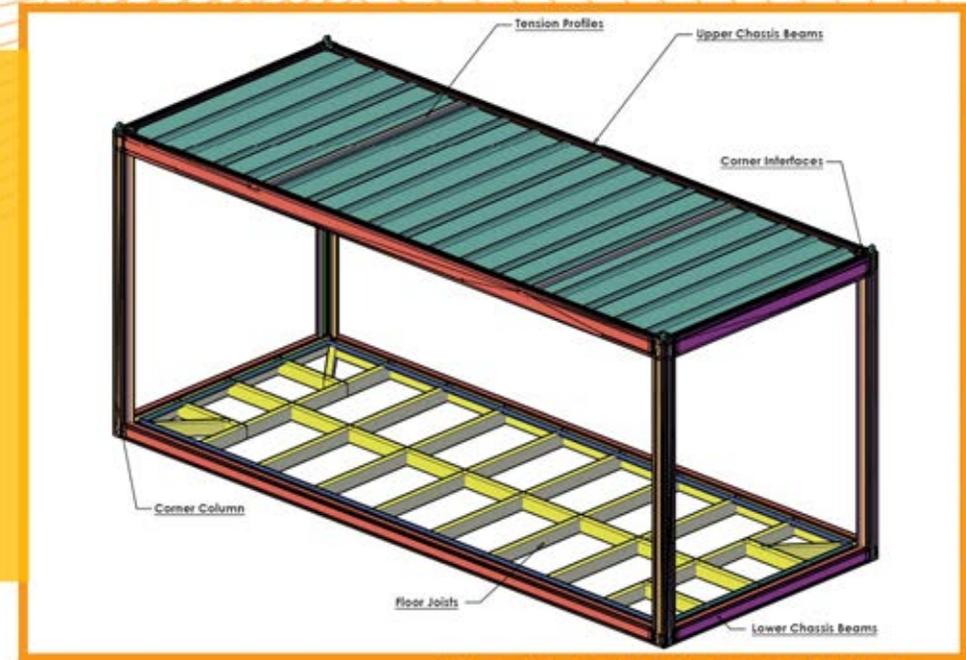

STRUCTURAL SYSTEM

Galvanized C&U profiles are used for main structure. The thickness of the metal diverse according to the locations of the containers, where there are going to be used.

Main Structural System

The modular containers, manufactured by Maxprefabs are designed according to the climate conditions where the unit will be located. All the required loadings are calculated, such as snow load, wind load and etc. All the metal thickness and across metal parts are designed according to the said loads.

Rain Drainage System

There is hidden rain gutters system on the top chasis of the containers. The water is moved to the corners, where the water comes out through corner special designed corner columns.

Flat Packed Container

1 Up to 10 units of flat pack containers are loaded into 1 unit of 40 ft hc/truck.

2 Single flat pack modular container

3 All the required parts are in the flat pack package

4 Structural system mounted

5 Wall panels assembly

6 Ready for usage
